1. DATA SHEET:

a. CONTAINER

Type: Box
UN Code: 4C1
Part Number: 12960999
Spec Number: MIL-B-2427
Material: Wood
Capacity: 2800.80 Cubic Inches (45,880.09 cu. cm)
Dimensions:
 Inside: 44.60 cm. x 43.18 cm x 23.65 cm
 (17 9/16 in. x 17 1/8 in. x 9 5/16 in.)

 Outside: 51.91 cm. x 47.30 cm x 29.21 cm
 (20 7/16 in. x 18 5/8 in. x 11 1/2 in.)

Closure (Method/Type): Nailed and Strapped
Tare Weight: 10.45 kg (23 lbs)

b. PRODUCT

Name: Expulsion Charge Assy
United Nations Proper Shipping Name: Charges, Propelling For Cannon
United Nations Number: 0279
NSN: 1320-01-3349448
Drawing Number: 12944315
Physical State: Solid
United Nations Packing Group: II
Quantity Per Wood Box: 100 Expulsion Charges

c. TEST MATERIALS

Name: Live Expulsion Charge Assy
Physical State: Solid
Size:
 Diameter = 1.29 inches max, except lid
 Length = 9.350 inches max

Quantity: 100 Live Expulsion Charge per Wood Box
Gross Weight: 66 pounds (30.0 kg)

2. BACKGROUND:

This report contains the testing and test results performed for Performance Oriented Packaging Certification of Expulsion Charge Assembly (Part Number 12944315) for M864, 155MM Projectile, Packed One Hundred (100) per Wood Box in accordance with drawing 12960996. Tests were performed in accordance with Part 178, Subpart M-Testing of Non-bulk Packaging and Packages, Title 49 of the Code of Federal Regulations (CFR).

3. INTRODUCTION:

The Department of Transportation (DOT) per CFR, Title 49, Parts 100-180, dated 1 Oct 92, requires that hazardous materials be packed in containers which satisfy the Performance Oriented Packaging (POP) requirements.

The Wood Box, part number 12960999, is being used as shipping container for 105 Grams Bag Type Expulsion Charge Assembly (Part Number 12944315) for M864, 155MM Projectile. The package contains one hundred (100) of Expulsion Charge Assemblies per wood box in accordance with drawing 12960996. Each packed wood box has an individual estimated gross weight of 66 pounds.

POP tests were conducted using Wood Boxes, each containing live Expulsion Charge Assemblies for a total gross weight of 70 pounds, resulting in a weight which is higher than the heaviest pack (estimated at 66 pounds) to insure wood box integrity. The tests were conducted in accordance with referenced sections of CFR, Title 49 and are valid only when approved ammunition is packed in the wood box as specified above for the Department Of Defense.

A total of five (5) packed wood boxes were POP tested in accordance with part 178, Subpart M-Testing of Non-bulk Packaging and Packages, Title 49 of the CFR.

4. TESTS PERFORMED:

a. Stacking Test

The CFR requires that the minimum height of the stack including the test sample must be 3.0 meters (10 feet). Five test samples are required. Each packed wood box has an individual gross weight of 70 pounds.

A 3.0 meter stack height of samples is equivalent to 700 pounds (318.18 kg) of stack weight. Five different test samples were each subjected to a stack weight of 700 pounds for a period of 24 hours. The samples were then inspected for any damage or distortion. The above procedures were performed in strict manner in accordance with paragraph 178.606 "Stacking Test" of the CFR.

b. Vibration Test

Three packed wood boxes, each having an individual gross weight of 70 pounds were tightly closed (nailed and strapped), as for shipment. The boxes were then placed on a vibrating platform that has a vertical double-amplitude (peak-to-peak displacement) of one inch. The three packed wood boxes were then vibrated for one hour to such a degree that a piece of steel strapping (1/16 inch thick) easily passed underneath any of the boxes at any given time throughout the test. The three boxes were horizontally prevented from falling off of the vibrating platform while being free to move vertically, bounce and rotate. Upon completion of the test, all three packed wood boxes were removed from the vibrating platform, turned on their side and observed for any evidence of breakage and leakage. The above procedures were performed in strict manner in accordance with paragraph 178.608 "Vibration Standards" of the CFR.

c. Drop Tests

The CFR specifies that one box should be used for each drop orientation. Each box shall be dropped from a height of 1.2 meters (3.9 feet) in the following orientations: drop flat on the bottom, drop flat on the top, drop flat on the long side, drop flat on the short side, and drop on the corner. A total of five (5) boxes are specified for the five different orientations with one box being dropped for each orientation. The above procedures were performed in strict manner in accordance with paragraph 178.603 "Drop Test" of the CFR.

5. PASS/FAIL (DOT CRITERIA):

- a. **Stacking Test:** A test sample passes the stacking test when no test sample spills its contents. No test sample may show any deterioration which could adversely affect transportation safety or any distortion likely to reduce its strength or cause instability in stacks of packages.
- b. **Vibration Test:** A packaging passes the vibration test if there is no rupture or spillage from any of the packages.
- c. **Drop Test:** A package for explosives is considered to successfully pass the drop tests if for each sample tested, no rupture of the packing occurs.

6. TEST RESULTS:

a. Stacking Test

All three packed wood boxes were removed from the stacking platform after 24 hours of test. Each wood box was carefully inspected for any structural damage. All the wood boxes tested were tightly intact and showed no evidence of rupture or spillage. All packages passed the test.

b. Vibration Test

All three packed wood boxes were removed from the platform after one hour vibration. Each of the wood box was physically inspected for any damage or spillage. All the wood boxes tested were tightly intact and showed no evidence of deterioration. There was no spillage or any damage of the three packed wood boxes. All packages tested passed the test.

c. Drop Test

Upon completion of the drop tests, all five packed wood boxes tested were carefully inspected for any damage. There were no cracks in the wood, ruptures or spillage. All packages tested passed the test.

7. CONCLUSION:

Based upon the above successful POP testing, the following UN POP marking symbol has been applied to the wood box in accordance with drawing 12960996.
